# **TRAN CANULA**

Canule de Tran

fabrinal  
EYE CARE

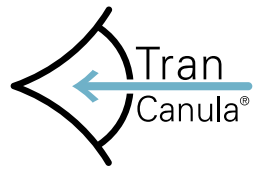

The Tran Canula® is a sterile and single use irrigation cannula used by physician in controlled environment to clear the pseudo-exfoliative particles in the anterior chamber of the eye. Unlike a conventional single jet irrigation cannula, this new instrument is characterized by two distinct water jets separated from each other by a 30° angle. Thanks to the unique design of the cannula and the laws of micro-hydrodynamics, these two independent fluid streams merge into one, more powerful, since they touch an obstacle.

#### TRAN CANULA®, TC- 01, SPECIFICATIONS

- Reference : TC- 01
- Cannula length : 19 mm
- Radius of curvature : 25 mm
- Outside diameter : 0.8 mm
- Design : Dr. V.T. Tran

#### TRAN CANULA® PACKAGING

- In a double sterile blister pack ; single use only.
- Packaging : 5 pieces
- 205 x 57 x 45 mm

La Tran Canula® est une canule d'irrigation stérile à usage unique utilisée par le médecin dans un environnement contrôlé, pour éliminer les particules pseudo-exfoliatives déposées dans la chambre antérieure de l'œil. Contrairement à une simple canule d'irrigation à jet classique, ce nouvel instrument est caractérisé par deux jets d'eau distincts séparés l'un de l'autre par un angle de 30°. Grâce à sa conception unique et aux lois de la micro-hydrodynamique des fluides, ces deux jets indépendants fusionnent en un seul fuseau liquide, plus puissant, dès lors qu'ils touchent un obstacle.

#### TRAN CANULA®, TC- 01, SPÉCIFICATIONS

- Référence : TC- 01
- Longueur canule : 19 mm
- Rayon de courbure : 25 mm
- Diamètre extérieur : 0.8 mm
- Design : Dr. V.T. Tran

#### TRAN CANULA® PACKAGING

- Sous double blister stérile, à usage unique.
- Emballage : 5 pièces
- 205 x 57 x 45 mm

Tran Canula® ist eine sterile Einweg-Spülkanüle, die in kontrollierter Umgebung von Ärzten angewandt wird, um die pseudoexfoliativen Partikel aus der vorderen Augenkammer zu entfernen.

Im Gegensatz zur herkömmlichen Einzelstrahl-Spülkanüle zeichnet sich dieses neue Instrument durch zwei getrennte Wasserstrahlen aus, die zueinander in einem Winkel von 30° stehen. Dank des einzigartigen Designs der Kanüle und aufgrund der Gesetze der Mikrohydrodynamik verschmelzen diese beiden unabhängigen Flüssigkeitsströme zu einem einzigen stärkeren, sobald sie ein Hindernis berühren.

#### TRAN CANULA®, TC- 01, CHARAKTERISTIKA

- Kennzeichen : TC- 01
- Kanülenlänge : 19 mm
- Krümmungsradius : 25 mm
- Aussendurchmesser : 0.8 mm
- Entwurf : Dr. V.T. Tran

#### TRAN CANULA® VERPACKUNG

- In einer doppelten sterilen Sichtverpackung ; zum einmaligen Gebrauch.
